

My app will allow users to draw on the screen using a mouse or touchscreen and save their creations.

The main functions of the application will be:

1. **Tool Selection:** Users will be able to select a drawing tool or an eraser. It will be possible to change the properties of the tool, such as thickness, and color.
2. **Color Selector:** Users will be able to select the color to draw. The colors will either be available in the palette or can be selected using code from the HTML color palette.
3. **Saving Drawings:** Users will be able to save their drawings as images on their computer.
4. **Undo/Redo:** Users will be able to undo the last drawing step or go back to the previous step.
5. **Clear everything from boards:** Users will be able to erase the entire drawing and start over.
6. **Using sound effects:** when you press the Cancel button, a sound will be played.
7. **JavaScript Library:** The web application is created using React.
